Hiring Team

Zalando

Re: Senior Applied Scientist - Demand Forecast

Dear Hiring Team,

I am writing to apply for the Senior Applied Scientist - Demand Forecast role at Zalando. My background combines statistical and machine learning approaches to forecasting with hands-on experience taking models from prototype to production, which matches what this role calls for. I hold a Master's degree in Machine Learning and AI, which gave me a grounding in the statistics and time-series methods the role is built on.

At Viavi Solutions, I developed time-series forecasting of base-station call handover and SMS handover volumes using LSTM and XGBoost, and built a forecasting feature for an AIOps monitoring product that forecasts univariate KPIs across the network. Earlier, as a Data Scientist, I applied Isolation Forest and Holt-Winters for anomaly detection and demand forecasting across 500+ telecommunications network devices using 15+ KPIs, which gave me a close look at the tradeoffs between statistical and ML-based forecasting methods at scale. Throughout, I have worked daily in Python, SQL, and PySpark, and delivered technical POCs and consulting sessions for 15+ clients.

Zalando's demand forecast engine sits at the center of how partners plan assortment and inventory, and moving beyond simple accuracy metrics toward real incrementality is exactly the kind of problem I want to work on. I like that the team owns the whole development cycle of its algorithms, from opportunity discovery to production, rather than handing models off after a proof of concept.

My fiancée already lives in Berlin, so this role lets me build my career in the city where we are making our home, and I am committed to settling in Berlin long term. I would welcome the chance to talk about how my forecasting background could contribute to the Partner Tech Applied Science team.

Sincerely,

Abhinav Kaushik
