Hiring Team

Smartly

Re: Senior Software Engineer – AI Platform Team

Dear Hiring Team,

I am applying for the Senior Software Engineer role on Smartly's AI Platform Team. For the past eight years I have been designing and shipping Python backend services that take ML models from a data scientist's notebook into production: REST APIs, microservice deployments, SLA-managed pipelines and the MLOps tooling that keeps them reliable. That is the exact surface your team is building on.

My fiancée lives in Berlin, and we are building our life there together; joining Smartly in Berlin is not a relocation I need to be persuaded about. Smartly sits at the intersection of creative performance and campaign data in a way few companies do, and I want to work on the AI infrastructure that drives real advertising outcomes, not just surface-level integrations.

Two things I would bring. At United Health Group I deployed a production Python backend that processed 1,800 lab documents and automated the work behind 800 Jira tickets; at Viavi I shipped an SLA-breach prediction service on FastAPI, Kubernetes and MLflow that cut downtime by 67%, with data scientists depending on it daily. I have also built 21+ automated TypeScript and Next.js mockup generators, so I can work across your React frontend as readily as the Python services, and I have mentored teams on testing and monitoring rather than leaving those to whoever is on call.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. The product runs on the same stack I would bring to Smartly, and building it for real users keeps me grounded in what production software actually demands. I would welcome a conversation about the role.

Sincerely,

Abhinav Kaushik
