Hiring Team

think-cell Software

Re: Data Scientist

Dear Hiring Team,

I am applying for the Data Scientist role in your Data Team. I have spent eight years building models that other people have to act on: risk scores, breach predictions, demand forecasts and propensity models, and more recently LLM and agent systems in production. The part I care about is the last mile, whether anyone actually changes a decision because of it.

My reason for applying is specific. My fiancée lives in Berlin and I am moving there to start my life with her, so I am looking for one team in the city to build the next years of my career with. think-cell is the kind of place I want that to be: a senior data team with real ownership inside an established business.

I would be useful to you quickly on customer, product and behavioural data. At Optum I rebuilt a member risk model with engineered features and real cross-validation, lifting AUC from 0.74 to 0.81. At United Health Group I built a multi-agent analytics chatbot in LangGraph that answers business questions with PySpark analysis and live charts, cutting manual analysis by 98%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Teachers tell me within a day when a feature does not help a student, and that is the feedback loop I try to build into any model I own. I would be glad to talk about the role.

Sincerely,

Abhinav Kaushik
