Hiring Team

Twilio

Re: Machine Learning Engineer

Dear Hiring Team,

I am applying for the Machine Learning Engineer role on the Conversation Intelligence team. As a senior machine learning engineer I take language models from prototype to production services, most recently an extraction agent that handles about 1,800 lab documents. What ties my work together is turning messy text into something a business can act on.

Twilio sits inside a huge number of customer conversations, and making sense of voice and messaging data at that scale is the problem I want to spend my next years on. There is a personal side too: my fiancée lives in Berlin, and we plan to move to Ireland together and settle there long term, so a remote role from Ireland fits us well.

I would bring the habits of shipping and running ML services. In telecom I built an SLA breach prediction service with LightGBM, FastAPI and MLflow that cut downtime by 67%. In healthcare I built evaluation and tracing pipelines for question-answering agents that reduced human review by 43%, because the monitoring matters as much as the model.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It has taught me to build for real users, test carefully and listen when something does not work for them. I would be glad to talk about how I could help your team.

Sincerely,

Abhinav Kaushik
