Hiring Team

2K

Re: Sr Applied Scientist

Dear Hiring Team,

I am applying for the Senior Applied Scientist role on the Applied AI team at 2K. For more than eight years I have built models that end up in production, from embedding-based retrieval and alarm clustering in telecom to agents in healthcare. What ties them together is turning a vague problem into a model people actually use.

NBA 2K is a game where small modelling choices shape how every match feels, and that is the kind of problem I want to work on: fair matchmaking, honest skill ratings and personalisation players notice. There is a personal side too. My fiancée lives in Berlin, and we plan to move to Dublin together and settle there long term.

I would bring a habit of getting the representation right before the model. At Viavi I embedded network alarms with Sentence-BERT and clustered them with DBSCAN, which improved semantic alarm classification by 73.5%. At United Health Group I fine-tuned a cross-encoder to re-rank dense retrieval, and at Optum a reranker I added to a plan recommender lifted conversion by 2%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It has taught me to design for the people on the other end of a model and to test with them rather than guess. I would welcome a conversation about the role.

Sincerely,

Abhinav Kaushik
