Hiring Team

Abbott

Re: Senior Data Scientist

Dear Hiring Team,

I am applying for the Senior Data Scientist role with the Digital, Data & AI team at Abbott Diabetes Care. Much of my data science work has sat close to healthcare data, from medical-audit reporting pipelines and plan recommendations to production AI at United Health Group, and it taught me that a model only matters once people trust it enough to act on it.

Building data capabilities from the ground up at a site that makes diabetes technology is work with a clear line to patients, and that is what draws me to it. My fiancée lives in Berlin, and we plan to move to Sligo together and settle there long term, so a role built for the long run suits us both.

I would bring predictive analytics that reaches production. At Viavi I deployed an SLA breach prediction model with LightGBM, FastAPI and MLflow that reduced downtime by 67%, and ran anomaly detection and forecasting on 15+ KPIs across 500+ network devices. At United Health Group I built evaluation pipelines with LLM evaluators that cut human review by 43%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Working with teachers has made me careful about validation and plain about limitations, which matters just as much in a regulated setting. I would welcome a conversation about the role.

Sincerely,

Abhinav Kaushik
