Hiring Team

Action

Re: Data Scientist

Dear Hiring Team,

I am applying for the Data Scientist role in Action's central Data Analytics team. For more than eight years I have worked on data science end-to-end, from scoping with business teams and exploring messy data to deploying models and watching them in production, most recently as a senior data scientist on healthcare data.

A retailer built on low prices lives or dies by good forecasts and lean operations, which is exactly where models make a visible difference to stores and supply chain. My fiancée lives in Berlin, and we plan to move to Zwaagdijk-Oost together and settle there long term.

I would bring forecasting and production habits. At Viavi I shipped anomaly detection and Holt-Winters demand forecasting on 15+ KPIs across 500+ network devices, and deployed a LightGBM SLA breach model with FastAPI and MLflow that reduced downtime by 67%. More recently I have built RAG and agentic workflows, useful for teams that want LLMs on top of their data.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It has taught me to build for the people who use a tool every day, and to keep things simple enough that they do. I would welcome a conversation about the role.

Sincerely,

Abhinav Kaushik
