Hiring Team

Bolt

Re: Applied AI Engineer, Operations Automation

Dear Hiring Team,

I am applying for the Applied AI Engineer role in Operations Automation at Bolt. I have shipped and operated LLM systems at United Health Group and Viavi, and the part I care about most is the unglamorous loop around them: test sets, traces, and working out why an agent got a decision wrong.

Bolt's plan to rebuild support, document checks and fraud review around decisions that improve with every case is the work I want to be doing, on-site next to the people who run those processes. My fiancée lives in Berlin, and we plan to move to Tallinn together and settle there long term.

I would start where the role does, with evaluation. I built evaluation and observability pipelines for our Question Answering and Summary Agents, with LLM evaluators and tracing, that cut human review by 43%. I also run a lab-extraction agent with Claude and Amazon Textract across about 1,800 documents, and at Viavi I let LightGBM do the prediction and GPT-3.5 only the explaining.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It has taught me to judge a system by what it does for the teacher using it, not by a benchmark. I would welcome a conversation about the role.

Sincerely,

Abhinav Kaushik
