Hiring Team

Bolt

Re: Senior AI / Agent Engineer

Dear Hiring Team,

I am applying for the Senior AI / Agent Engineer role on Bolt's new People systems team. Over the past year I have shipped production AI agents at United Health Group, including a lab-extraction agent wired into LIMS, together with the evaluation and tracing that make them safe to trust. The thread through my work is turning unpredictable model behaviour into systems people can rely on.

Bolt helps people move through their cities every day, and the People processes behind that deserve the same reliability as the product. Agents that touch payroll and employee records need scoped permissions and a human in the loop, which is the work I enjoy most. My fiancée lives in Berlin, and we plan to move to Estonia together and settle there long term.

On a new team I would help set the patterns early: clear tool contracts, regression suites and audit trails before scale. I built evaluation and observability pipelines with LLM evaluators and tracing that reduced human-in-the-loop review by 43%, and a LangGraph analytics chatbot that cut manual analysis by 98%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Building for teachers and children has taught me to design for the person on the other side and to be careful about what a system is allowed to do. I would be glad to talk about how I could help the team.

Sincerely,

Abhinav Kaushik
