Re: Senior Machine Learning Scientist - Agentic Modelling Team

Dear Hiring Team,

I am applying for the Senior Machine Learning Scientist role in the Agentic Modelling Team. My recent work has centred on agents in production: multi-agent systems in LangGraph, retrieval, and the evaluation that tells you whether a new strategy is really better. Years of classical ML before that still shape how I measure things.

Your team builds the platform that lets other teams compose their own agents, so a good idea on memory or planning improves every trip rather than one product. That reach is what draws me. My fiancée lives in Berlin, and we plan to move to Amsterdam together and settle there long term.

At United Health Group I built a LangGraph multi-agent analytics chatbot that cut manual analysis by 98%, and evaluation pipelines with LLM evaluators and tracing that reduced human-in-the-loop review by 43%. I would bring that same loop of building, measuring and improving to agent strategies and memory systems, working closely with your ML engineers.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Designing it around how students lose and regain context has shaped how I think about agent memory. I would be glad to talk about how I could contribute to the team.

Sincerely,

Abhinav Kaushik
