Hiring Team

Clera

Re: AI/LLM Engineer

Dear Hiring Team,

I am applying for the AI/LLM Engineer role. I build AI agents end to end, from the data pipeline that feeds them to the backend they run on, and most recently shipped an agent that reads unstructured lab documents into structured records. The thread in my work is getting language models to do dependable work on messy real data.

Clera automates quoting and order processing for distributors and manufacturers, which is exactly the kind of document and product-matching problem I like solving in a small team close to the product. My fiancée lives in Berlin, and we plan to move to Munich together and settle there long term.

I would bring two things I have already done. I fine-tuned a cross-encoder to rerank dense retrieval, which improved retrieval accuracy, and I built SQL and PySpark pipelines over large healthcare datasets that cut manual reporting effort by 95%. RLHF and DPO would be new for me, and I would learn them quickly.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It has taught me to ship small, test with real users and fix what they find. I would welcome a conversation about the role.

Sincerely,

Abhinav Kaushik
