Hiring Team

Delivery Hero

Re: Senior Data Scientist - (Global Search, Consumer)

Dear Hiring Team,

I am applying for the Senior Data Scientist role in the Search Ranking team. In my data science work I have improved retrieval and ranking more than once, from fine-tuning a cross-encoder reranker to adding a reranker to a live recommendation system. What ties it together is carrying models from offline experiments into production and watching them there.

Search is where a customer decides in seconds whether the app understood them, and ranking across many markets and languages at Delivery Hero is a problem I want to work on. My fiancée lives in Berlin, and I am building my career in the city where we are making our home.

I would bring production discipline and fast experimentation. My reranker on an existing recommendation system lifted conversion by 2%, and the automated evaluation pipelines I built for our Question Answering and Summary Agents cut human review by 43%, the kind of setup that makes reviewing many experiment runs manageable.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It keeps me focused on what users actually see, not only on offline metrics. I would be glad to talk about the team's ranking roadmap.

Sincerely,

Abhinav Kaushik
