Hiring Team

Devoteam

Re: Distributed Cloud / Data Scientist

Dear Hiring Team,

I am applying for the Data Scientist role in Devoteam's Distributed Cloud team. My data science work has mostly been about framing a business question as a data problem, building the statistical or ML model that answers it, and explaining the result so people act on it. That last step is the one I care about most.

Devoteam works across many client projects, and that variety suits me: at Viavi I delivered POCs and consulting for 15+ clients and enjoyed moving between domains. Your Tech for People idea also matches why I do this work. My fiancée lives in Berlin, and we plan to move to Portugal together and settle there long term.

I would bring models that reach production and stories that land. At Viavi I shipped anomaly detection and forecasting on 15+ KPIs across 500+ network devices, and an SLA breach prediction system with LightGBM, FastAPI and MLflow that cut downtime by 67%. Earlier, my QlikSense and SQL dashboards raised user engagement by 40%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It reminds me that analysis only matters when it helps a real person decide something. I would be glad to talk about how I could support your clients.

Sincerely,

Abhinav Kaushik
