Hiring Team

Dexcom Ireland - Athenry

Re: Senior Research Scientist (AI)

Dear Hiring Team,

I am applying for the Senior Research Scientist (AI) role at Dexcom. My work sits where applied research meets production: at United Health Group I design evaluation pipelines for LLM agents and fine-tune retrieval models on healthcare data. The thread through it is simple: a model in health is only useful once you can measure that it behaves safely.

Dexcom's move from glucose monitoring toward broader health insights is research I want to be part of, because sensor data people wear every day is where predictive health can make a real difference. My fiancée lives in Berlin, and we plan to move to Athenry together and settle there long term.

I would bring careful experiments and a builder's instinct. I built evaluation and observability pipelines with LLM evaluators that reduced human-in-the-loop review by 43%, and I fine-tuned a cross-encoder that improved retrieval accuracy on survey data. At Viavi I also shipped anomaly detection and forecasting on 15+ KPIs across 500+ network devices.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It has taught me to build with the people who will depend on a system and to check its effect before claiming it works. I would welcome a conversation about your research program.

Sincerely,

Abhinav Kaushik
