Hiring Team

Emerging Travel Group

Re: Senior Data Scientist (Look-2-Book)

Dear Hiring Team,

I am applying for the Senior Data Scientist (Look-2-Book) role. I build classic ML end to end, from SQL and PySpark pipelines to LightGBM and XGBoost models running behind production APIs. What connects my work is turning a vague business question into a model that people can act on.

Emerging Travel Group builds the booking platforms that hotels, agents and travellers rely on, and predicting whether a search turns into a booking is the kind of problem I like: a clear metric, real revenue and messy data. My fiancée lives in Berlin, and we plan to move to Portugal together and settle there long term.

At Viavi I deployed a LightGBM system that predicted SLA breaches and reduced downtime by 67%, served with FastAPI and MLflow. At Optum I built a reranker on top of an existing recommendation system that lifted renewal conversion by 2%. I would bring the same habit of tying models to business outcomes to your look-to-book work.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Building for teachers and children has taught me to check what a model does for real users before trusting a metric. I would welcome a conversation about the role.

Sincerely,

Abhinav Kaushik
