Re: Senior Machine Learning Engineer I, Search Ads

Dear Hiring Team,

I am applying for the Senior Machine Learning Engineer I role on the Search Ads team. My work sits in retrieval, ranking and NLP: cross-encoder re-ranking over dense retrieval, a reranker for a recommendation system, and Sentence-BERT models in production. The thread through all of it is putting the right result in front of the right person.

Etsy's ads help small sellers get their listings seen by buyers, which makes relevance matter to real businesses, not only to a revenue line. I like working on that kind of problem. My fiancée lives in Berlin, and we plan to move to Dublin together and settle there long term.

At Optum I built a reranker on an existing recommendation system that raised renewal conversion by 2%. At Viavi I deployed a LightGBM system with FastAPI and MLflow that reduced downtime by 67%, and kept it monitored in production. I would bring both habits, careful ranking and careful operation, to your ads funnel.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It reminds me that every model has an end user, and that their experience is the real test. I would be glad to talk about the role.

Sincerely,

Abhinav Kaushik
