Hiring Team

GoCardless

## Re: Senior Data Scientist, Payment Intelligence

Dear Hiring Team,

I am applying for the Senior Data Scientist role in the Payment Intelligence team at GoCardless. As a data scientist I have owned models from the first vague question through feature engineering to production and monitoring. The common thread is building models that make a live decision and then proving they help.

GoCardless moves payments for businesses of every size, and stopping payer fraud without blocking good payments is a problem where data science decides the outcome directly. I have also worked on fraud detection in my own projects, so the domain pulls me in. My fiancée lives in Berlin, and we plan to move to London together and settle there long term.

I would bring full lifecycle ownership. At Viavi I shipped an SLA breach prediction system with LightGBM, FastAPI and MLflow that cut downtime by 67%. I also built anomaly detection on 15+ KPIs across 500+ network devices with Isolation Forest, which is close in spirit to spotting unusual payment behaviour.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It reminds me that models only matter when real people can depend on them. I would be glad to talk about how I could contribute to Payer Fraud Prevention.

Sincerely,

Abhinav Kaushik
