Hiring Team

Holidu

Re: Data Scientist - Mid-level/Senior

Dear Hiring Team,

I am applying for the Data Scientist role at Holidu at the senior level. As a data scientist I have owned predictive models from the first prototype to production, from gradient boosting on tabular data to demand forecasting. What connects that work is making a model earn its place in a real business decision.

Holidu sits in a marketplace where ranking, pricing and demand all shape whether a host gets booked, and that mix of modelling problems is what I enjoy most. I also like that the team owns its use cases end to end. My fiancée lives in Berlin, and we plan to move to Munich together and settle there long term.

I would bring hands-on depth in the modelling you use. At Viavi I shipped an SLA breach prediction model with LightGBM and MLflow that cut downtime by 67%, and demand forecasting with Holt-Winters across 500+ network devices. At Optum I added a reranker to a recommendation system that increased conversion by 2%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It has taught me to test ideas with real users and keep what works. I would be glad to talk about which problem area I could take on.

Sincerely,

Abhinav Kaushik
