Hiring Team

ING Nederland

Re: Risk AI Data Scientist

Dear Hiring Team,

I am applying for the Risk AI Data Scientist role at ING. My recent data science work sits close to what this role needs: RAG over unstructured documents, extraction from PDFs with OCR, and agentic workflows that support expert users. The thread through my career is turning messy data into models that people can trust in production.

Your Integrated Risk team is building the AI layer that helps risk managers work through credit policies, regulations and model documentation, where precision and governance matter as much as speed. That mix of rigour and real use is what draws me to it. My fiancée lives in Berlin, and we plan to move to Amsterdam together and settle there long term.

At United Health Group I built a document-extraction agent with Claude and Amazon Textract that handles about 1,800 lab documents, and evaluation pipelines with LLM evaluators that cut human review by 43%. I also built a fraud detection workflow pairing LightGBM with LLM explanations for financial-risk analysis. I would bring the same care for evaluation to your risk models.

Outside work, I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It has taught me to build carefully for people who depend on the answers being right. I would welcome a conversation about how I could contribute to your team.

Sincerely,

Abhinav Kaushik
