Hiring Team

Intent HQ

Re: Senior Applied AI Scientist

Dear Hiring Team,

I am applying for the Senior Applied AI Scientist role at Intent HQ. My work spans clustering, sequence models, transformers and NLP, and more recently agents that ship as production code. The thread that runs through it is taking a model from a client's problem to something they actually use.

Intent HQ turns first party behavioural data into context that enterprises can act on, and the hard part is making that science pay off for each customer. Customer behaviour is where my modelling career began, with propensity models, and I want to go much deeper into it. My fiancée lives in Berlin, and we plan to move to London together and settle there long term.

At Viavi I clustered alarm text with Sentence-BERT and DBSCAN to trace alarm floods back to their root event, improving classification by 73.5%. I also prototyped 15+ AI applications with clients, and 7 of them reached production or paid work. I would bring that mix of modelling depth and customer prototyping to your pods.

Outside work, I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Working with teachers there has taught me to listen before I build and to explain models in plain words. I would welcome a conversation about your behavioural AI work.

Sincerely,

Abhinav Kaushik
