Hiring Team

Johnson Controls

Re: Senior Data Scientist (Agentic AI Platform)

Dear Hiring Team,

I am applying for the Senior Data Scientist role on your Agentic AI Platform. My data science work today is mostly agentic: multi-agent systems in LangGraph, RAG pipelines and the evaluation that keeps them honest, built on a base of classical ML. The thread through it all is getting models out of notebooks and into production.

Johnson Controls runs the building systems behind data centers, hospitals and factories, and a platform of agents that plan and act across those workflows is a problem I want to work on. It is practical AI with a direct effect on energy use. My fiancée lives in Berlin, and we plan to move to Warsaw together and settle there long term.

At United Health Group I built a multi-agent analytics chatbot that cut manual analysis by 98%, and evaluation pipelines with LLM evaluators and tracing that reduced human review by 43%. Earlier, at Viavi, I shipped an SLA breach prediction system with LightGBM, FastAPI and MLflow. I would bring both sides, agents and classical ML, to your platform.

Outside work, I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Building for real classrooms has taught me to add guardrails early and release with care. I would welcome a conversation about your platform and team.

Sincerely,

Abhinav Kaushik
