Hiring Team

KONUX

Re: Senior Data Scientist

Dear Hiring Team,

I am applying for the Senior Data Scientist role. My data science work has mostly been on time-series signals from live systems, such as network KPIs, alarm streams and logs, where I built models, tested them and released them into production myself. The thread through it is taking a messy real-world problem all the way to a model people trust.

KONUX applies AI to sensor data from railway infrastructure, so a good model means better maintenance decisions and fewer surprises on the track, which is work I find worth doing. My fiancée lives in Berlin, and we plan to move to Munich together and settle there long term.

I would bring production experience on this kind of data. At Viavi I shipped anomaly detection and demand forecasting on 15+ KPIs across 500+ network devices, and deployed an SLA breach prediction system with LightGBM, FastAPI and MLflow that reduced downtime by 67%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It has taught me to test carefully and listen to the people using what I build. I would be glad to talk about how I could contribute to your team.

Sincerely,

Abhinav Kaushik
