Hiring Team

Kramp

Re: Data Scientist

Dear Hiring Team,

I am applying for the Data Scientist role at Kramp. Over eight years I have turned business problems into working data products, from a reranker for a health plan recommendation system to LightGBM prediction and demand forecasting for telecom networks. What ties it together is testing ideas against real outcomes before trusting them.

Kramp keeps farmers and dealers running by getting the right parts to them quickly, and that mix of e-commerce and supply chain is where good models show up in everyday work. There is a personal reason as well: my fiancée lives in Berlin, and we plan to move to Varsseveld together and settle there long term.

I would like to take a domain such as recommenders or supply chain and own it end to end. At Viavi I built an SLA breach prediction system with LightGBM, FastAPI and MLflow that reduced downtime by 67%, along with demand forecasting across 500+ network devices. Earlier, a reranker I added lifted conversion by 2%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It keeps me honest about building for real users and checking that each change actually helps them. I would be glad to talk about how I could contribute to your team.

Sincerely,

Abhinav Kaushik
