Hiring Team

LexisNexis Risk Solutions

Re: Principal Data Scientist

Dear Hiring Team,

I am applying for the Principal Data Scientist role at LexisNexis Risk Solutions. For more than eight years I have built predictive models and put them into production, from SLA breach prediction in telecom to data pipelines on healthcare records. The common thread is making models useful to the people who take decisions with them.

Your insurance team turns data into better decisions on pricing, underwriting, claims and fraud, and much of my own work has been on health insurance data at United Health Group and Optum, so the domain feels close. My fiancée lives in Berlin, and we plan to move to Dublin together and settle there long term.

I would bring hands-on depth in production modelling and the pipelines around it. At Viavi I built an SLA breach prediction system with LightGBM, FastAPI and MLflow that cut downtime by 67%, and I guided POCs for 15+ clients. Earlier, SQL and PySpark pipelines I engineered cut manual audit reporting by 95%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It has taught me to explain complex ideas simply and to build carefully for the people who rely on the result. I would welcome a conversation about how I could support your team.

Sincerely,

Abhinav Kaushik
