Hiring Team

Mastercard

Re: Lead Data Scientist, AI Engineering

Dear Hiring Team,

I am applying for the Lead Data Scientist, AI Engineering role at Mastercard. Over eight years I have taken machine learning projects from a loose business question to a model in production, across propensity, forecasting, recommendation ranking and anomaly detection. What connects them is measuring impact honestly against what existed before.

Your AI Centre of Excellence is building reusable learned representations from transaction data so teams stop rebuilding features for every use case, and that shift is the work I want to be part of. My fiancée lives in Berlin, and we plan to move to Dublin together and settle there long term.

I would bring applied depth and a habit of guiding others. At Viavi I built an SLA breach prediction system with LightGBM and MLflow that reduced downtime by 67%, and an alarm clustering engine on Sentence-BERT embeddings that improved classification by 73.5%. Mentoring across 15+ client POCs taught me to lead through influence.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It reminds me that a model is only as good as its effect on the people using it. I would be glad to talk about how I could help shape your team's work.

Sincerely,

Abhinav Kaushik
