Hiring Team

Mastercard

Re: Senior Data Scientist, AI Engineering

Dear Hiring Team,

I am applying for the Senior Data Scientist, AI Engineering role at Mastercard. For eight years I have built predictive models that people actually use, from loan propensity scoring and plan recommendations to network forecasting and anomaly detection. Each project started with a business question and ended with a measured result.

What draws me to your AI Centre of Excellence is the idea of learning representations from transaction data once and reusing them across use cases, instead of hand-building features every time. My fiancée lives in Berlin, and we plan to move to Dublin together and settle there long term.

I would bring production modelling experience across several of your use cases. At Optum I added a ranking model to a plan recommendation system that raised conversion by 2%, and at Viavi I clustered alarms using Sentence-BERT embeddings, improving classification by 73.5%. I also built an SLA breach prediction model that reduced downtime by 67%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Building for teachers and students has made me careful about checking that a model really helps before calling it done. I would be glad to talk about how I could contribute to your team.

Sincerely,

Abhinav Kaushik
