Hiring Team

Moss

**Re: Senior Data Scientist (f/m/d)**

Dear Hiring Team,

I am applying for the Senior Data Scientist role at Moss. My data science work combines hands-on LLM agents, for extraction and question answering, with classical ML for classification and anomaly detection. The thread through all of it is owning a model from framing the problem to seeing stakeholders actually use it.

Moss takes manual work off finance teams by automating invoices, cards and expenses, and extraction, classification and anomaly detection on that data is exactly where I have built before. Moss started in Berlin, which I noticed, since my fiancée lives in Berlin. We plan to move to London together and settle there long term.

At United Health Group I built a document-extraction agent with Claude and Amazon Textract that handles about 1,800 lab documents, with evaluation pipelines that cut human review by 43%. At Viavi I shipped anomaly detection across 500+ network devices and an SLA breach prediction system that reduced downtime by 67%. I would bring that end-to-end ownership to your finance models.

Outside work, I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It has taught me to test with real users and keep improving until the tool is adopted. I would welcome a conversation about your Data & AI team.

Sincerely,

Abhinav Kaushik
