Hiring Team

Picnic Technologies

Re: Senior Machine Learning Engineer

Dear Hiring Team,

I am applying for the Senior Machine Learning Engineer role. I have spent recent years building ML systems that sit inside operations: forecasting demand on telecom networks, predicting SLA breaches before they happen, reranking recommendations. The thread through all of it is simple: a model only matters once it is monitored and wired into the process it is meant to improve.

Picnic runs its own fleet, warehouses and app, so ML touches every step from forecasting orders to getting drivers to the door on time, and clean, logged data like yours is rare. My fiancée lives in Berlin, and we plan to move to Amsterdam together and settle there long term.

I would bring production ML with the stakeholder side included. At Viavi I shipped anomaly detection and Holt-Winters demand forecasting on 15+ KPIs across 500+ network devices, and a LightGBM SLA breach prediction system served with FastAPI and MLflow that reduced downtime by 67%. Both began with operations teams explaining what they actually needed.

Outside work, I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It keeps me focused on whether a system really helps the person using it. I would be glad to talk about how I could contribute to your team.

Sincerely,

Abhinav Kaushik
