Hiring Team

REPA

Re: AI Engineer / Specialist

Dear Hiring Team,

I am applying for the AI Engineer / Specialist role in your AI & Innovation team. My recent work is what the role describes: finding a business process worth automating, building a generative AI prototype, and taking it into production with monitoring. The thread across it is AI that creates measurable value.

REPA keeps commercial kitchens running by getting the right part to a technician quickly, and a catalogue that large is exactly where RAG and AI agents earn their keep. My fiancée lives in Berlin, and we plan to move to Bergkirchen together and settle in Bavaria long term.

At United Health Group I deployed a document-extraction agent with Claude and Amazon Textract that handles about 1,800 lab documents, integrated with the lab system. At Viavi I prototyped 15+ AI applications from client requirements, and 7 reached production or paid client work.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Building for real users taught me to take privacy and reliability seriously, which fits your GDPR and AI Act focus. I would welcome a conversation about the role.

Sincerely,

Abhinav Kaushik
