Hiring Team

Revolut

Re: Data Scientist (NLP Deep Learning Engineer)

Dear Hiring Team,

I am applying for the Data Scientist (NLP Deep Learning Engineer) role at Revolut. My recent work is building LLM and NLP products that real users rely on: a multi-agent analytics chatbot, a document-extraction agent and a fine-tuned cross-encoder for retrieval. The thread through it all is shipping models, not just prototypes.

Revolut puts assistants and copilots in front of customers who manage their money every day, and that is where careful NLP work pays off most. There is a personal side too: my fiancée lives in Berlin, and we plan to move to Porto together and settle there long term.

I would bring experience of the full path from idea to production. My LangGraph analytics chatbot for medical plans cut manual analysis by 98%, and the evaluation pipelines I built with LLM evaluators and tracing reduced human review by 43%. Both taught me to measure quality before scaling a feature.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It keeps me focused on how people actually use what I build, not just what the model can do. I would be glad to talk about how I could help your team.

Sincerely,

Abhinav Kaushik
