Hiring Team

SAP

Re: Data Science Expert (Domain Models) - Data Labs

Dear Hiring Team,

I am applying for the Data Science Expert role in Data Labs. Much of my recent work is the problem your team describes: making AI agents accurate by grounding them in real business data rather than surface patterns. From telecom alarms to healthcare lab documents, the thread has been retrieval and context a model can rely on.

SAP holds the process data behind order-to-cash, procurement and finance for a large share of global commerce, and building the semantic layer on top of it is the most interesting grounding problem I can think of. My fiancée lives in Berlin, and we plan to move to Munich together and settle in Germany long term.

I would bring RAG and agent engineering that has already run in production. At United Health Group I built a LangGraph multi-agent chatbot over medical-plan data that cut manual analysis by 98%, and at Viavi a RAG assistant that reached a 90% match rate against existing solutions. Ontology design is where I would grow fastest, building on my graph and retrieval work.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Teachers only keep using a tool whose answers they can trust, and I hold enterprise agents to the same standard. I would welcome a conversation about the role.

Sincerely,

Abhinav Kaushik
