Hiring Team

Spotify

Re: Senior Staff Machine Learning Engineer - Content Platform

Dear Hiring Team,

I am applying for the Senior Staff Machine Learning Engineer role on the Content Platform team. For eight years I have built ML systems whose outputs drive real decisions, from telecom alarm classification to healthcare agents that replace manual review. What ties that work together is getting automation right without losing quality.

Spotify has to decide, in real time, whether a constant stream of new music, podcasts and user-generated content is safe and correctly understood. That mix of scale, policy and fairness is the problem I want to spend the next years on. My fiancée lives in Berlin, and we plan to move to Stockholm together and settle in Sweden long term.

I would bring systems thinking across models, evaluation and serving. At Viavi I deployed an SLA breach prediction system with LightGBM and GPT-3.5 root-cause analysis that cut downtime by 67%, and built alarm classification with Sentence-BERT and DBSCAN. At United Health Group my evaluation pipelines with LLM evaluators reduced human review by 43%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It keeps me honest about who a system is for: the teacher and the student, not the metric. I would be glad to talk about how I could help your team.

Sincerely,

Abhinav Kaushik
