Hiring Team

Too Good To Go

Re: Senior Machine Learning Engineer

Dear Hiring Team,

I am applying for the Senior Machine Learning Engineer role in Consumer Growth. I build ML models and take them into production myself, from a recommendation reranker and prediction systems to forecasting in telecom. I care most about the part after the notebook: experiments, deployment, and whether the model changed anything.

Too Good To Go turns a very concrete problem, food going to waste, into a product people use every day, and better personalization means more meals saved. That is a result I would be glad to work toward. My fiancée lives in Berlin, and we plan to move to Copenhagen together and settle there long term.

I would bring end-to-end ownership. I implemented a reranker for a recommendation system that raised plan renewal conversion by 2%, and deployed a LightGBM prediction model with FastAPI and MLflow that reduced downtime by 67%. I am comfortable with Python, SQL, PyTorch and Airflow in cloud setups.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Like your mission, it is about impact people can feel, and it keeps me building carefully. I would welcome a conversation.

Sincerely,

Abhinav Kaushik
