Hiring Team

Vevo Technologies

Re: Senior Machine Learning Engineer

Dear Hiring Team,

I am applying for the Senior Machine Learning Engineer role in the AI team. My work has always covered the whole ML lifecycle on real-world data: deciding what to label, training models, building evaluation that shows where they fall short, and shipping inference that holds up in production. That full-cycle ownership is the part I enjoy most.

Vevo turns a single camera into proof of what happened on the pitch, so a young player's run gets seen even when no scout was there. I like that the result of the modelling is fairness for players. My fiancée lives in Berlin, and we plan to move to Copenhagen together and settle there long term.

I would bring careful evaluation habits and production experience. At United Health Group I built evaluation pipelines with LLM evaluators and failure detection that cut human review by 43%, and fine-tuned a cross-encoder on positive and negative pairs. At Viavi I deployed a LightGBM prediction system with FastAPI and MLflow that reduced downtime by 67%. Computer vision is where I would grow next.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It taught me to watch how people actually use a model before deciding it works. I would be glad to talk about joining your team.

Sincerely,

Abhinav Kaushik
