Hiring Team

Vestas

Re: Specialist, Machine Learning Engineer

Dear Hiring Team,

I am applying for the Specialist, Machine Learning Engineer role in the AI/ML Chapter. I design and ship ML, GenAI and agentic systems into production, most recently multi-agent LLM applications in healthcare after years of predictive ML in telecom. The thread through all of it is turning a promising use case into a service people depend on.

Vestas applies AI to renewable energy, where better operations have a direct effect on the climate, and building agentic workflows for that is work I would find meaningful. My fiancée lives in Berlin, and we plan to move to Copenhagen together and settle there long term. I have also worked closely with teams in India, which fits your setup.

I would bring experience across the full lifecycle. I built a LangGraph multi-agent chatbot that cut manual analysis by 98%, with evaluation and tracing pipelines that reduced human review by 43%. Earlier I put a LightGBM prediction system into production with FastAPI and MLflow, and I use Docker, Kubernetes and Terraform day to day.

Alongside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It keeps me grounded in building for real users, carefully. I would be glad to talk about how I could contribute to the team.

Sincerely,

Abhinav Kaushik
