Hiring Team

Women in Data®

Re: Data Scientist-Manager

Dear Hiring Team,

I am applying for the Data Scientist - Manager role in PwC's Data & AI Consulting team. My data science work has moved from forecasting and prediction models to agentic AI, much of it built with and for clients. The thread is models that are rigorous enough to trust and simple enough to explain.

Building reusable AI products across many client contexts, from pricing to agents, is the kind of work I enjoyed most in consulting at Viavi. My fiancée lives in Berlin, and we plan to move to London together and settle there long term.

At Viavi I shipped anomaly detection and demand forecasting on 15+ KPIs across 500+ network devices, and delivered POCs and consulting for 15+ clients. At United Health Group I built a LangGraph multi-agent chatbot that cut manual analysis by 98%. I would bring that mix to your product squads.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It keeps me focused on responsible AI that its users can understand and trust. I would welcome a conversation about the role.

Sincerely,

Abhinav Kaushik
