Hiring Team

commercetools

Re: Senior AI Search engineer

Dear Hiring Team,

I am applying for the Senior AI Search Engineer role on the Discovery team. The part of my work closest to what you need is retrieval: Solr and Lucene indexing, Elasticsearch, and semantic retrieval with cross-encoder re-ranking. What ties it together is helping people, and now agents, find the right thing when they ask in plain language.

commercetools sits underneath the storefronts of demanding commerce brands, and search is changing fast as shoppers type full sentences and AI agents call the API directly. Making hybrid retrieval fast, affordable and measurably better is exactly the work I want. My fiancée lives in Berlin, and we plan to move to London together and settle there long term.

I would bring relevance work. At United Health Group I fine-tuned a cross-encoder on positive and negative pairs to re-rank dense retrieval, and at Optum a reranker on a recommendation system lifted conversion by 2%. At Viavi I built a RAG assistant with semantic retrieval that reached a 90% match rate. Scala would be new, and I would pick it up with the team.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It taught me that a good answer only counts if the person asking can find it. I would be glad to talk about how I could help the Discovery team.

Sincerely,

Abhinav Kaushik
