Re: Senior AI Search engineer

Dear Hiring Team,

I am applying for the Senior AI Search Engineer role on your Discovery Team. Most of my recent work comes back to retrieval: re-ranking dense results with a fine-tuned cross-encoder, building RAG assistants that find the right answer in a large body of documents, and running these systems in production. Search that understands what people mean is the thread through all of it.

commercetools sits underneath the storefronts of large brands, and the change you describe, shoppers typing full sentences and AI agents calling the API, is the problem I most want to work on next. There is a personal reason too: my fiancée lives in Berlin, and I am building my career in the city where we are making our home.

I would bring hands-on relevance work to the team. At United Health Group I fine-tuned a cross-encoder on positive and negative pairs to re-rank dense retrieval, and at Viavi I built a LangGraph discovery assistant that reached a 90% match rate against existing solutions. I am also comfortable owning the serving side with FastAPI, Docker and Kubernetes.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It keeps me honest about building for real users and checking whether something actually helps them. I would welcome a conversation about where the Discovery Team is taking hybrid retrieval next.

Sincerely,

Abhinav Kaushik
