Hiring Team

sennder

## Re: Machine Learning Engineer

Dear Hiring Team,

I am applying for the Machine Learning Engineer role on your ML team. Most of my work sits between data science and engineering: exploring the data until the problem is clear, building the model, then taking it into production myself. That end-to-end habit is the thread through my 8+ years in Healthcare, Telecom and AIOps.

What draws me to sennder is that it owns the platform, the operations and the data behind road freight, so a pricing or carrier forecasting model meets real outcomes quickly. My fiancée lives in Berlin, and we plan to move to Amsterdam together and settle there long term.

I would bring models that people actually use. At Viavi I built an SLA breach prediction system with LightGBM, FastAPI and MLflow that cut downtime by 67%, and at Optum I added a reranker to a live recommendation system that lifted conversion by 2%. I also build LLM agents, so I know when an LLM helps and when a simple model wins.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Working with those teachers taught me to start from the user's workflow before writing any code. I would be glad to talk about how I could help your team.

Sincerely,

Abhinav Kaushik
