Hiring Team

veo

Re: Senior Machine Learning Engineer

Dear Hiring Team,

I am applying for the Senior Machine Learning Engineer role in Veo's AI team. Over 8+ years I have taken machine learning systems from a first idea to production, and learned that the work is only finished when you understand where a model fails. Building models that people can trust is the thread through my career.

Veo turns a single camera on any pitch into evidence about every player, and the idea that a young player no longer depends on someone happening to notice them really speaks to me. My fiancée lives in Berlin, and we plan to move to Copenhagen together and settle there long term.

I would bring end-to-end ownership and careful evaluation. At Viavi I took an SLA breach prediction system into production with LightGBM, FastAPI and MLflow, reducing downtime by 67%. At United Health Group I built evaluation pipelines with tracing and failure detection that cut human review by 43%, the same habit I would bring to your models.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It has taught me to build for real users and to check results with care before calling anything done. I would be glad to talk about how I could contribute to the AI team.

Sincerely,

Abhinav Kaushik
