Re: Data Scientist, Data Quality & Provenance

Dear Hiring Team,

I am applying for the Data Scientist role in Data Quality and Provenance. My data science work has always ended in a decision: which system to fix, which alarm to trust, which model is good enough to ship. Turning large, messy datasets into findings that engineering teams act on is the thread through my career.

Wayve is teaching vehicles to drive through learned models rather than maps, and in that world the quality of the data and the metrics decides what gets better. That is work I care about. My fiancée lives in Berlin, and we plan to move to Stuttgart, Germany together and settle there long term.

I would bring strong SQL and a habit of turning analysis into priorities. At Nippon Data Systems I built SQL and PySpark pipelines on large healthcare datasets that cut manual reporting effort by 95%. At United Health Group I defined evaluation metrics for question answering and summary agents that reduced human review by 43%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It reminds me to measure whether something truly helps before trusting it. I would be glad to talk about how I could support your engineering teams.

Sincerely,

Abhinav Kaushik
