Hiring Team

Accenture UK & Ireland

Re: AI/ML Computational Scientist Manager

Dear Hiring Team,

I am applying for the AI/ML Computational Scientist Manager role at Accenture. Most of my eight-plus years have been spent in the space this role describes: taking a client's problem and data, choosing and adapting the model, and building the pipelines that keep it running in production.

Accenture puts AI into client systems where it has to earn its place, and that is how I have always worked, first in consulting and then in product teams. My fiancée lives in Berlin, and we plan to move to Ireland together and settle there long term, so a role with a long runway there suits us.

At Viavi I prototyped 15+ AI applications from client requirements, and 7 of them moved into production or paid client work. At United Health Group I deployed a lab-extraction agent on the Claude API with Amazon Textract that handles about 1,800 documents, with evaluation and monitoring pipelines that cut human review by 43%.

Outside work I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Building it for teachers has taught me to scope carefully and ship what real users can rely on. I would welcome a conversation about the role.

Sincerely,

Abhinav Kaushik
