Hiring Team
Epsilon France

Re: Ingénieur Data Science confirmé(e) (F/H/X)

Dear Hiring Team,

I'm applying for the Ingénieur Data Science confirmé(e) (F/H/X) role with 8+ years of experience using data science and machine learning to solve production problems across healthcare, telecom and AIOps. My work has ranged from data pipelines and statistical modelling to AI applications, with a consistent focus on turning analysis into something a team can use.

What interests me about Epsilon France is the problem represented by this role and the opportunity to combine data work with models that have a clear operational use. My fiancée lives in Berlin, and we plan to move to Paris together and settle there long term.

My recent work combines Python, SQL and PySpark with production machine learning and AI applications. I have built analytics systems in LangGraph, retrieval and reranking models, forecasting and anomaly detection pipelines, and production APIs with FastAPI and MLflow, giving me a practical base for work where data quality, modelling and delivery all have to come together.

Alongside my professional work, I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Building it for real users keeps me focused on clarity, reliability and the experience around the technology, not just the model. I would welcome the opportunity to discuss how my background could contribute to the team.

Thank you,
Abhinav Kaushik
