Hiring Team

FIA – Fédération Internationale de l'Automobile

Re: F1 Data Scientist

Dear Hiring Team,

I'm applying for the F1 Data Scientist role with a background that combines hands-on machine learning engineering with an MSc in Machine Learning and AI. Over 8+ years across healthcare, telecom and AIOps, I have built, evaluated and deployed models while working through the practical constraints that come with real production data.

What interests me about FIA – Fédération Internationale de l'Automobile is the technical problem represented by this role and the balance between model quality, experimentation and practical constraints. My fiancée lives in Berlin, and we plan to move to Switzerland together and settle there long term.

My recent work includes fine-tuning a cross-encoder for dense retrieval and building LLM evaluation and failure-detection pipelines, alongside production ML systems with measurable outcomes. My MSc in Machine Learning and AI gives me a strong academic foundation, while my industry work has taught me to evaluate models against real data and engineering constraints.

Alongside my professional work, I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Building it for real users keeps me focused on clarity, reliability and the experience around the technology, not just the model. I would welcome the opportunity to discuss how my background could contribute to the team.

Thank you,

Abhinav Kaushik
