Hiring Team

hello again

Re: AI Solutions Engineer (d/f/m)

Dear Hiring Team,

I'm applying for the AI Solutions Engineer (d/f/m) role with 8+ years of experience building AI and machine learning systems while working closely with technical and business stakeholders. My work across healthcare, telecom and AIOps has included client POCs, production delivery and translating ambiguous operational problems into systems people can actually use.

What interests me about hello again is the opportunity to work across real business problems while staying close to implementation and delivery. My fiancée lives in Berlin, and we plan to move to Austria together and settle there long term.

At Viavi Solutions, I built more than 30 AI application prototypes from client requirements, with 7 reaching production or paid use. I also delivered production systems with FastAPI and MLflow, which taught me to move from an ambiguous business problem to a technical approach, explain tradeoffs to stakeholders and stay involved through delivery.

Alongside my professional work, I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Building it for real users keeps me focused on clarity, reliability and the experience around the technology, not just the model. I would welcome the opportunity to discuss how my background could contribute to the team.

Thank you,

Abhinav Kaushik
