Hiring Team
HelloFresh

Re: Senior Data Scientist, Demand Forecasting, Food Systems

Dear Hiring Team,

I'm applying for the Senior Data Scientist, Demand Forecasting, Food Systems role because my background combines machine learning with the operational problems that forecasting is meant to support. I'm a Senior AI Engineer with 8+ years of experience across healthcare, telecom and AIOps, including time-series forecasting, anomaly detection and production ML systems.

What interests me about HelloFresh is the practical forecasting problem behind this role, where model quality has to translate into better planning, monitoring or decisions. My fiancée lives in Berlin, and we plan to move to Warsaw together and settle there long term.

I developed time-series forecasting for base-station call and SMS handover volumes using LSTM and XGBoost, and built a forecasting feature for univariate network KPIs. I also used Holt-Winters forecasting and anomaly detection across 500+ telecom devices, so my experience covers both model development and the operational setting in which forecasts are consumed.

Alongside my professional work, I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Building it for real users keeps me focused on clarity, reliability and the experience around the technology, not just the model. I would welcome the opportunity to discuss how my background could contribute to the team.

Thank you,
Abhinav Kaushik
