Hiring Team
Infineon Technologies

Re: Staff Specialist Artificial Intelligence (Generative AI & Large Language Models (LLM))
(f/m/div)

Dear Hiring Team,

I'm applying for the Staff Specialist Artificial Intelligence (Generative AI & Large Language Models (LLM)) (f/m/div) role with a background in building production AI systems rather than working only at the prototype stage. I'm a Senior AI Engineer with 8+ years of experience across healthcare, telecom and AIOps, with recent work spanning LLM applications, agents, retrieval, evaluation and deployment.

What interests me about Infineon Technologies is the applied AI problem behind this role and the need to turn LLM or agent capabilities into dependable software. My fiancée lives in Berlin, and we plan to move to Austria together and settle there long term.

At UnitedHealth Group, I built a lab-extraction agent using Claude Opus 4.7, Amazon Textract and LIMS, and a LangGraph multi-agent analytics system for AARP medical plans with stateful reasoning and live charts. I also built automated LLM evaluation and tracing pipelines, while earlier at Viavi I built a RAG project discovery assistant.

Alongside my professional work, I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Building it for real users keeps me focused on clarity, reliability and the experience around the technology, not just the model. I would welcome the opportunity to discuss how my background could contribute to the team.

Thank you,
Abhinav Kaushik
