Hiring Team
Mitsui Chemicals Group

Re: Machine Learning Engineer Automatisiertes Fahren

Dear Hiring Team,

I'm applying for the Machine Learning Engineer Automatisiertes Fahren role because my experience has consistently covered the path from data and model development through production deployment. I'm a Senior AI Engineer with 8+ years across healthcare, telecom and AIOps, working with Python, machine learning, APIs, data pipelines and MLOps tooling.

What interests me about Mitsui Chemicals Group is the engineering side of this role, where machine learning has to work reliably with data, services and production systems. My fiancée lives in Berlin, and we plan to move to Munich together and settle there long term.

I built an SLA breach prediction system with LightGBM, FastAPI and MLflow, together with an automated RCA workflow, and worked on anomaly detection and forecasting across telecom KPIs. More recently, I have built production AI applications with LangGraph, retrieval and evaluation pipelines, giving me experience across modelling, services and deployment rather than modelling in isolation.

Alongside my professional work, I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. Building it for real users keeps me focused on clarity, reliability and the experience around the technology, not just the model. I would welcome the opportunity to discuss how my background could contribute to the team.

Thank you,
Abhinav Kaushik
