PhD Candidate in AI-assisted medical imaging with MRI | Norwegian University of Science and Technology (NTNU)

I am a Senior AI Engineer with 8+ years of experience building production AI, ML and LLM systems across healthcare, telecom and AIOps. My recent work spans retrieval, agentic applications, evaluation, analytics and production deployment.

I am applying for the PhD Candidate in AI-assisted medical imaging with MRI role in Norway. My fiancée lives in Berlin, and I am building my career in Norway while planning our move together and settling there long term.

I would bring practical experience from production systems including multi-agent analytics in LangGraph, retrieval and reranking, LLM evaluation, forecasting, and Python/PySpark data workflows. I have also worked with FastAPI, Docker and MLflow to move solutions from development into operational use.

Alongside my professional work, I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. I would welcome a conversation about the role and the problems your team is solving.
