Re: AI Solutions Engineering Analyst

Dear Hiring Team,

I am applying for the AI Solutions Engineering Analyst role in Amsterdam. My work has been exactly the stack described in the posting: data and knowledge foundations, RAG pipelines, prompts and context strategies, and agents that have to keep working once a client depends on them. I have built these from first prototype through to deployment.

A partnership model is what interests me here, because the AI problems worth solving usually sit inside someone else's operations and need patience to understand. I have worked that way with clients across three regions. My fiancée lives in Berlin, and we plan to move to Amsterdam together and settle there long term, so I am looking for somewhere to stay and grow.

Two things I could contribute from day one. I developed an internal RAG assistant in LangGraph that reached a 90% match rate against existing organizational solutions, and I built automated testing and observability for question answering agents with LLM evaluators, reducing manual review by 43%. I also prototyped 15+ client AI applications, 7 of which became real work.

In my own time I am building ThinkTree.AI, a non-profit AI learning platform used by NGO teachers to support students with ADHD. It is a reminder that an AI solution is only good if a non-technical person can rely on it. I would be glad to talk about the use cases your team is taking on next.

Sincerely,

Abhinav Kaushik
